

Project Life Cycle Safety Suite

PLCS SUITE

Athanasios Bougas

Sigma Information Systems

Project Life Cycle Safety Suite

Background

H&S project management functions are expected to produce a big volume of data which have to be entered, properly configured and shared in different levels of administration.

Before PLCS, all data monitoring was performed through Excel or other similar data processing tools.

Main advantages

- Familiarity with the tools
- Usability
- Freedom in creating and configuring data

Main disadvantages

- Excessive freedom in creating and configuring data
- Difficult data homogenization
- Difficult to compare data between different projects
- Difficult to reference related documentation
- Difficult to configure user data access privileges

Project Life Cycle Safety Suite

What is PLCS

A powerful web SaaS (Software as a Service) platform which facilitates the creation, configuration, monitoring, reporting and sharing of project information (and much more).

Key features

- Multilanguage
- Usability
- Pre-configured data models
- Easy to create custom data models
- Information homogenization
- Variety of metrics and statistics
- Dynamic reporting
- Fine grained data access management per user
- Alerting / Early notification
- GDPR management

Project Life Cycle Safety Suite

Pre-configured modules (indicative list)

- Site Equipment
- Safe Pass
- Trainings
- Fire Extinguishers
- Incidents
- Health and Safety Plans
- Action Tracking
- Permits to Work
- Subcontractors

Project Life Cycle Safety Suite

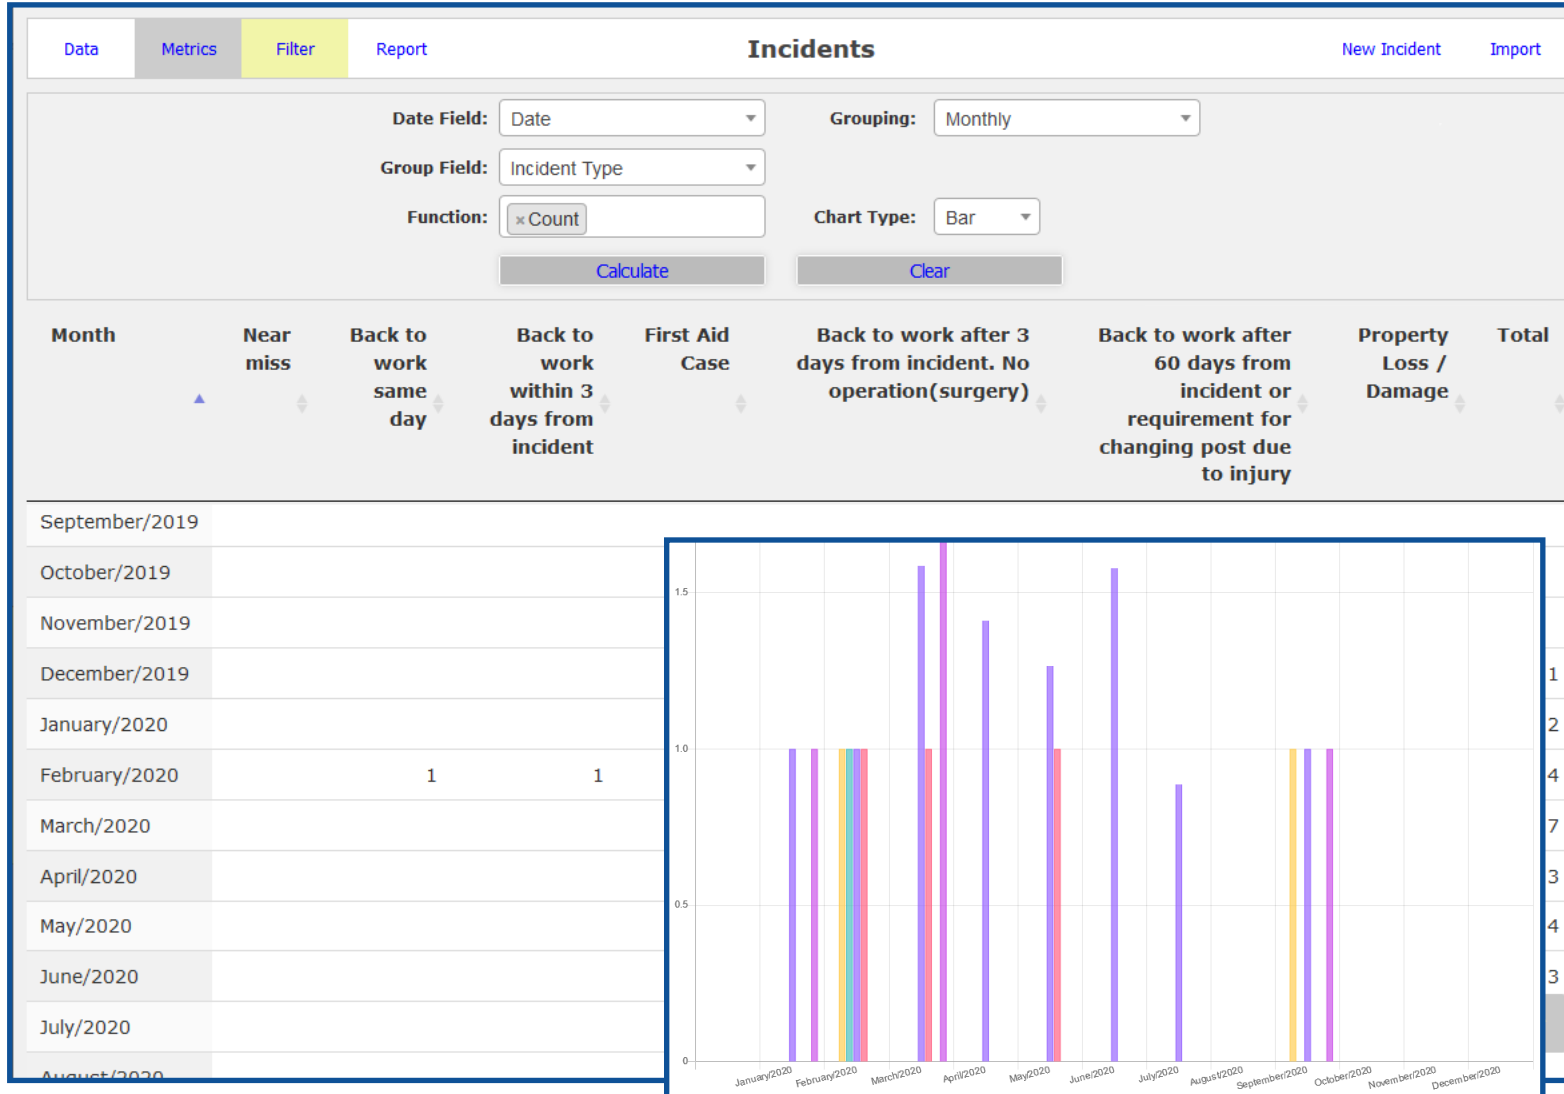

Pre-configured module: Safe Pass

Safe Pass											
(No filter - showing latest 100 records. Click to show all)
